Important Notes from the Publisher

This report principally relies on official published national statistics. Where no data is available to Gobi International, an estimate is made. When making estimates Gobi International assumes that the structure of demand is broadly similar between countries. When projecting forecasts, Gobi International have assumed that the demand trend in a given country will track that country's GDP. We forecast individually for each country and forecasts are made in Q1 2010.

Clients are advised that the historic trend is not always an indicator of future development. All values in this report are presented in US Dollars at the average annual exchange rate. For countries other than the USA, the trends in market values therefore also contain an element of the fluctuation in exchange rates between the local currency and the US Dollar.

Whilst we use our best efforts in the preparation of the materials for inclusion in this report, we do not assume, and hereby disclaim any liability to any party for loss or damage cause through errors or omissions in the publication whether these errors or omission result from accident, negligence or any other cause.
